

Analysis of the cause of fire in energy storage power supply

What causes large-scale lithium-ion energy storage battery fires?

Conclusions Several large-scale lithium-ion energy storage battery fire incidents have involved explosions. The large explosion incidents, in which battery system enclosures are damaged, are due to the deflagration of accumulated flammable gases generated during cell thermal runaways within one or more modules.

How do battery energy storage units interact with power supply and discharge systems?

Interactions with power supply and discharge systems occur via an external Power Conversion System and Energy Management System as shown in Fig. 1. Battery Energy Storage Units have doors for operating and maintenance personnel and for installation and replacement of equipment.

How many energy storage battery fires are there?

Unfortunately, there have been a large number of energy storage battery fires in the past few years. For example, in South Korea, which has by far the largest number of energy storage battery installations, there were 23 reported fires between August 2017 and December 2018 according to the Korea JoongAng Daily (2019).

Why are lithium-ion batteries causing fires and explosions?

Deflagration pressure and gas burning velocity in one important incident. High-voltage arc induced explosion pressures. Utility-scale lithium-ion energy storage batteries are being installed at an accelerating rate in many parts of the world. Some of these batteries have experienced troubling fires and explosions.

Why are batteries prone to fires & explosions?

Some of these batteries have experienced troubling fires and explosions. There have been two types of explosions; flammable gas explosions due to gases generated in battery thermal runaways, and electrical arc explosions leading to structural failure of battery electrical enclosures.

Why is a delayed explosion battery ESS incident important?

One delayed explosion battery ESS incident is particularly noteworthy because the severe firefighter injuries and unusual circumstances in this incident were widely reported (Renewable Energy World, 2019).
