In a world run mainly on fossil fuels, finding ways to store electricity was not a pressing concern: Power plants across a regional electrical grid could simply burn more fuel when demand was high. But large-scale electricity storage promises to be an energy game-changer, unshackling alternative energy from the constraints of intermittence.

A while back, Eskom introduced a block system as a way to make electricity affordable for those who use little and also discourage high consumption. The first block of electricity is at the lowest price. As you buy more electricity during the month, the electricity bought will eventually fall in block two, which is more expensive.

Save solar energy through solar panels and store solar energy in FHP during sunny days and use a battery bank when required. Using self-generated clean energy will be the cheapest way. Homeowners Franklin Home Power Solution Products App Success Stories ...

The choice of the cheapest way to store solar energy depends on the specific context and requirements of the project. Lithium-ion batteries are often favored for their versatility and decreasing costs, but other technologies ...

This is one of the cheapest ways to heat a greenhouse without electricity. Paraffin heaters run using fuel and this option is less expensive than electricity. Moreover, these heaters generate CO₂ and the photosynthesis process of plants relies a lot on CO₂ gas.

Thermal stores are highly insulated water tanks that can store heat as hot water for several hours. They usually serve two or more functions: Provide hot water, just like a hot water cylinder. Store heat from a solar thermal system or biomass boiler, for providing heating later in the day.; Act as a "buffer" for heat pumps to meet extra hot water demand.

One of the best ways to make your own electricity is through solar energy. Start by investing in 2-3 solar panels and have them mounted in a sunny area, such as a rooftop. Consult a professional about installation for the panels, and create a thorough budget that will help you maintain the system.

Funniest way to store MJ would be to search a nice little valley and use a floodgate to fill it with fuel. Perhaps you could build a little village in there first and have the church's bell tower loom over the fuel level.
