The solar system immediately started producing and has been supply well in excess of 60% of our electricity most days. The very first partial month of operation reduced our electric bill by over half. We got a real world test of the backup capabilities of the system shortly after installation when the power went out for about 2 1/2 hours.

The HLD6000 uses a long-life infrared sensor with high sensitivity and extremely short response time, and has been specifically developed for the detection of refrigerants. In addition the HLD6000 has a proven dual inlet system which continually compares the background concentration and the measured gas flow, thus keeping false alarms to a minimum.

Energy and green chemistry are two sectors that are really active in Montreal and Quebec. The challenge to transform the whole petrochemical industry as well as plastic recycling is a big one. We are well-positioned to take advantage of the active and growing green energy and green chemistry sectors in Montreal and Quebec.

Something that we advocate for a lot recently is combining renewable energy creators such as air source heat pumps and solar panels with the energy management system in our smart home set ups. A great example of this is our design studio which has won awards in sustainability for its innovative use of smart home technology utilizing Control4 ...
