"Achieving energy independence in Guadeloupe by shifting from fossil fuels to renewable energy sources is a challenge that we must take up for the benefit of future generations. With clear objectives and applying the means for success, the Multi-Year Energy Program (PPE) exemplifies our political resolve to reach our goals."

In 2021, electricity consumption in Guadeloupe primarily relied on fossil energy, which accounted for more than half, almost two-thirds of the total electricity used. In contrast, low-carbon energy sources made up roughly one-third of the electricity mix, with biofuels, wind, solar, and geothermal each contributing a portion. Biofuels were the most significant among the low-carbon sources ...
