How do I connect my energy storage system?

Install your energy storage systems quickly, safely, and cost-effectively for applications up to 1,500 V - with pluggable battery connections via busbar connection or via battery pole connector. Benefit from the advantages of both connection technologies for front or rear connection.

Why do we need special connection technology for battery storage systems?

Special connection technology optimized for use in storage systems is required in order to connect these storage systems quickly, safely, and efficiently. Busbar connections and battery-pole connectors for battery storage systems are safe and cost-effective. Find out more here in the video.

Why do we need energy storage systems?

Energy storage systems enable the self-consumption of renewable energy regardless of when it is generated. They therefore make a significant contribution to alleviating the load on power grids and support the integration of renewable energy into the power grid.

What type of connector should I use?

Use the type of connector that is perfectly suited for your individual application. Connector, color: orange, number of positions: 1, max. conductor cross-section: 120 mm², rated voltage: 1500 V DC, rated current: 350 A, Connection method: Crimp, min. cable diameter: 18.8 mm, max. cable diameter: 22.5 mm

FPIC IP67 high voltage DC power connectors are masterfully engineered for energy storage systems and other demanding applications requiring robust and dependable connections. ...

Applications: Energy storage connectors provide a safe, reliable and efficient connection between energy storage systems and other electrical devices. They are used in home storage system, ...
