What is the energy potential of the Faroe Islands?

Faroe Islands exhibit high wind and hydro potential. Electricity, heating and onshore transportation needs are considered in this work. RES annual penetration higher than 90% can be achieved. Wind parks, p/vs and pumped storage systems are the most feasible technologies. RES penetration above 95% requires smart grid integration concepts.

Can Faroe Island achieve 100% energy independence?

The achievement of the 100% energy independence in the remote insular systems of the Faroe Islands is proved to be a real challenge. The topos of Faroe Island is truly blessed with abundant wind and hydrodynamic potential and excellent sites for PHS installations, integrated in a breath-taking, majestic landscape.

Which technology is most feasible in the Faroe Islands?

Wind parks, p/vs and pumped storage systems are the most feasible technologies. RES penetration above 95% requires smart grid integration concepts. The Faroe Islands complex consists of 18 islands.

Why should you choose Faroe Island?

The topos of Faroe Island is truly blessed with abundant wind and hydrodynamic potential and excellent sites for PHS installations, integrated in a breath-taking, majestic landscape. The low wind potential availability during summer constitutes the main obstacle to be faced, for a clear, 100% exclusive energy production in Faroe from RES.
