Will a wind farm deliver a third of the Isle of Man's electricity needs?

Plans to build a wind farm capable of delivering around a third of the Isle of Man's electricity needs by 2026 are on schedule. Manx Utilities updated the Council of Ministers last week and outlined potential sites for the 20MW windfarm, alongside plans to install 10 Megawatts of solar on public buildings.

How will the electricity sector change in the Isle of Man?

As the uptake for electric heating and electric vehicles increases, the electricity sector will have to grow to meet future demand. The majority of the Isle of Man's electricity is currently sourced from fossil fuels.

Could the Isle of Man re-import electricity from an offshore wind farm?

With interconnectors the Isle of Man could re-import electricity generated from an offshore wind farm, allowing GB to manage the balancing. This would likely result in much lower costs to consumers. CFDs are not currently open to the Isle of Man as it is not part of the UK.

How will a wind farm impact the Isle of Man?

Environmental: The development of a 700-800 MW capacity wind farm in Manx territorial waters will provide the IoM with renewable, zero carbon electricity. Such a development will play a key role in decarbonising the Isle of Man economy to meet net zero targets.

Where does the Isle of Man electricity come from?

The majority of the Isle of Man's electricity is currently sourced from fossil fuels. The interconnector is a source of carbon neutral electricity on island and also provides a route to export electricity to the GB Market.

Will intermittent renewables be profitable for the Isle of Man?

It is unlikely that the export of intermittent renewables will be profitable for the Isle of Man given the reasons outlined in this document. The Isle of Man currently imports all of its energy from the UK (with the exception of what is produced from Sulby).
