Industrial Park ESS Solution. The development of the renewable source market has driven the development of ESS industry. Many industrial parks have begun to gradually build ESS to achieve energy efficiency which is able to reduce energy consumption costs and improve economic benefits through energy arbitrage.

Its working concept is to use PV energy generation, and the generated energy is used to charge EV or stored into ESS. The emergence of PV-plus EV charging with ESS integration not only solves the problem of distribution network restricted by limited land and power capacity resources, but also achieves local balance between local energy ...

Energy storage can jointly control distributed energy resources through EMS and the main grid, to stabilize the fluctuations of distributed energy resources and ensure stable output. It improves the on-site utilization of distributed energy, and prevents transmission pressure and power loss in long-distance transmission.

connectors, liquid cooling plate module, fixed structural components, these accessories enable the PACK module to have protection functions such as overvoltage, undervoltage, overcurrent, insulation, short circuit, and overheat.

Support order samples, customization, wholesale direct, and complete payment. If the product you look for does not have corresponding customized content, pls fill out the form below to contact us, and we will reply ASAP.

BMS supports two architectures: three-level architecture (BMU+BCU+BAU) and two-level architecture (BMU+BCU). BMU,BCU and BAU respectively oer PACK-level, cluster-level and array-level protection against overcharging, over-discharging, overcurrent, overheat and short circuit for baery clusters.

The Elecnova ESS products can be applied in commercial complex ESS projects. It can be connected to the low-voltage grid or to medium-voltage and high-voltage grid with step-up transformers to achieve demand management, energy arbitrage, and dynamic expansion.
