What is a mobile EV charging station?

Mobile off-grid electric vehicle(EV) charging stations for temporary and semi-permanent EV charging deployments. Fully portable charging

What applications can EV charging stations be used for?

The portable and re-deployable charging stations can be used for any of the following charging applications: EVESCO's innovative energy storage systems can be used for other off-grid applications, not just for EV charging.

Are EV charging stations a viable option for your business?

For some businesses, permanent EV charging stations are not an option due to either physical or operational limitations. EVESCO has addressed this issue and developed a portable containerized off-grid charging station that is completely pre-fabricated at our production facilities and fully customizable to meet your specific charging needs.

What are the different types of energy storage options?

Scalable, Modular Energy Storage: Configurations range from 150kWh to 450kWh, with daisy-chaining options for extended capacity. Energy Storage Only - Providing flexible, off-grid power solutions. CCS DC Fast Charging - Featuring dual 150kW CCS chargers, suitable for high-speed public and commercial EV charging.

What can a containerized EV charging station do?

If a connection to the electric grid is unavailable the containerized charging station can integrate with renewables such as solar and wind, power generators utilizing biofuels or natural gas, and fuel cells powered by hydrogen for a completely off-grid, sustainable, net-zero EV charging solution.
