

What is chemical energy storage?

Chemical energy storage is defined as the utilization of chemical species or materials to extract energy immediately or latently through processes such as physical sorption, chemical sorption, intercalation, electrochemical reactions, or chemical transformation. You might find these chapters and articles relevant to this topic.

What can chemical energy storage scientists do for PNNL?

Chemical energy storage scientists are working closely with PNNL's electric grid researchers, analysts, and battery researchers. For example, we have developed a hydrogen fuel cell valuation tool that provides techno-economic analysis to inform industry and grid operators on how hydrogen generation and storage can benefit their local grid.

How does chemical storage work?

Depending on how it is stored, it can be kept over long periods and is not seasonally dependent like pumped hydro. Chemical storage can add power into the grid and also store excess power from the grid for later use. Alternatively, many chemicals used for energy storage, like hydrogen, can decarbonize industry and transportation.

What is the storage of energy through reversible chemical reactions?

The storage of energy through reversible chemical reactions is a developing research area whereby the energy is stored in chemical form. In chemical energy storage, energy is absorbed and released when chemical compounds react.

What are the key factors for chemical energy storage materials?

The key factors for such kinds of chemical energy storage materials are as follows: Large density; Easy to store and transport; Compatible to the existing infrastructure; Easy to produce and high round-trip efficiency; Environment friendly.

Which energy storage facility has the largest capacity?

With each facility ranging in the terawatt-hours, chemical energy storage has by far the largest capacity. It is also the only option for seasonal energy storage using the charging technology power-to-gas in combination with the existing gas infrastructure for storing and converting gas into electricity.
