What is Pakistan's energy source?

According to the National Electric Power Regulatory Authority's (NEPRA) 2021 yearly report, Pakistan's total installed power generation capacity is 39772 MW. Of this, 5.4% comes from renewable sources, such as wind, solar, and biomass. The remaining 94.6% comes from other sources, including 63% from thermal (fossil fuels), 25% from hydro, and 6.5% from nuclear.

How does the project support the energy transition in Pakistan?

The project supports the energy transition with the following measures: Supporting institutions in the Pakistani energy industry to adopt regulatory requirements, policy guidelines, or instruments for implementing the Renewable Energies Strategy.

Can Pakistan use wind energy in the coastal belt of Sindh & Baluchistan?

Pakistan's coastal belt in Sindh and Baluchistan (in southern Pakistan) has considerable potential for using wind energy. The Government of Pakistan (GOP) has developed a wind power energy corridor along these southern coastal regions.

Why is Pakistan's energy future challenging?

Pakistan's energy future is challenging due to weak governance, uncoordinated energy policymaking, and a lack of long-term energy planning. U.S. and international assistance have helped Pakistan make some strides in addressing these problems, but without major reforms, the situation remains difficult.
