

Or a better way to put it -- a phantom energy problem. Phantom energy is when your electronics or appliances drain energy when they're not being used. Yep, even if your TV, computer, or washing machine are turned off, they're still draining energy. That's why we call these things "energy vampires" because they suck power when not in use.

According to the U.S. Department of Energy, an ENERGY STAR computer uses 70% less electric energy than computers without this designation. If left inactive, ENERGY STAR computers enter a low-power mode. Spending a large portion of time in low-power mode saves energy and helps equipment run cooler and last longer.
