

# Specifications for stair steps of photovoltaic support

What are the performance elements of stair design?

Performance elements of stair design such as protection from falling, fire safety and accessibility for all users has bearing on the design of a staircase, and details are included in the individual guidance documents that accompany different parts of the Building Regulations.

What are the requirements for a staircase?

The steps of a staircase have to be wider and lower and must not have any trip hazards such as nosing overhang. There must also be a continuous handrail on each side. Applications: New build- all of the above applicable

How should a precast staircase be constructed?

ch flight. Precast units should be accurately located and NSTRUCTIONS Shuttering for in-situ concrete elements or connections should be accurately constructed to ensure a consistent rise R FINISHES For both precast and in-situ staircases, allowance should be made for the thickness of finish at the top and bottom

How should a steel staircase be constructed?

staircases The supporting structure should be constructed within the tolerance limits set for the steel staircase. Treads should be checked for level. The correct fixings should be structions Manufacturers' assembly and erection instructions should be available and e handhold A handrail should be provided for any flight that rises 600

How should staircase lighting be controlled?

staircase Artificial light sources should be provided to all staircases and landings. Within dwellings, lighting to stairs should be controlled by two way switching. Where the Public Lighting Authority specify and maintain control of entrance lighting, their requirements sho

What is the minimum headroom in a staircase?

The minimum headroom in any part of the staircase should be at least 2 meters. This regulation is in place to prevent accidents caused by hitting one's head against a ceiling or obstruction while using the stairs.

At JELD-WEN we independently load test our stairs in accordance with BS 585 and BS 6399-1, to meet with the standards set out by the BWF stair scheme. During the testing process the ability for the stairs to support imposed loads of 1.5kN/m<sup>2</sup> (domestic stairs) and 3kN/m<sup>2</sup> (communal stairs) are assessed. The weight is

on blocks added to the stair string to suit the tread and riser dimensions. See Figures 4-6 for details. For a wide stair, add mid-span strings for support. Although stairs up to 1.5 m wide may not BRANZ MAXIMUM SPAN FOR SG8 (H3.2) STRING SIZES. Table 1 STRING SIZE MAXIMUM SPAN 290 &#215; 45 mm 4.0 m 240
