

What type of energy does Venezuela use?

Venezuela relies heavily on domestic production of fossil fuels, with oil and natural gas comprising approximately 90% of the country's total energy supply. Hydro power also plays a key role in electricity generation, accounting for roughly half of installed capacity.

Does Venezuela have hydropower?

It provides that the state must consider efficiency and the use of renewable energy in the provision of electric service. The law reserved hydropower in the Caroná, Paragua y Caura rivers (the major Orinoco tributaries with most of Venezuela's developed hydropower) for the state.

Does Venezuela have a natural gas market?

Venezuela's energy sector has lost much of its capacity to collect and use natural gas, preferring instead to burn it off. Venezuela's government regulates natural gas prices, and concerns exist about the pricing structure and regulations for this market.

Is photovoltaic energy gaining speed in Venezuela?

That is until a 2016 report by the Scientific Institute Francisco de Miranda emphasized the "technical possibilities and the low cost of photovoltaic energy in the country." Despite a phase of fits and starts, harnessing electricity via solar panels and storing it in batteries is a practice that is picking up speed in Venezuela.

How does Venezuela's economic policy affect energy consumption?

Venezuela's restrictive economic policies (Figure 3) have resulted in a decrease in inflation-adjusted GDP per capita, which has led to a decrease in energy consumption (Figure 4). Venezuela has the refining capacity to meet its domestic demand, but the country's refineries are in poor condition.

What is the role of coal in Venezuela's energy mix?

In comparison to oil and natural gas, coal plays a minor role in Venezuela's energy mix, accounting for 0.2% of total energy production and 0.1% of total energy consumption. Venezuela's coal industry has faced challenges such as outdated infrastructure and limited investment, which has affected production.
