

Wind funnel power generation

Is funnel based wind energy harvesting system feasible?

In this paper, design and experimental setup of funnel based wind energy harvesting system (FBWEHS) is explained in detail. For studying the feasibility of this new approach, a subsonic wind tunnel testing is carried out. Further smoke test in the wind tunnel is also carried out for visualizing the flow of air into the nested funnel.

What is a wind funnel concentrator system?

*Correspondence: Email: akour@ju.edu.jo; Tel: +9626535000. Abstract: Wind Funnel Concentrator System captures wind flow from any direction, funnels it down using tapered pipes leading to a concentrator that ends in Venturi section where the turbine should be placed. This Wind Concentrator system is called INVELOX machine.

When will a unique wind funnel-based power generating system start construction?

A unique wind funnel-based power generating system that is quickly garnering interest from investors could see first construction kickoff in the first quarter of 2016.

Can fbwehs generate more power than modern wind turbines?

Generated power is in the range of 0.0001 W to 9.93 W over a range of wind velocities at funnel inlet as 0.5 m/s to 7.89 m/s. With this, FBWEHS is feasible to generate more power than modern wind turbines under similar conditions of wind turbine swept area and the wind velocities by eliminating the yaw control.

Does a two-story funneling system increase wind speed at a venturi?

They reported 25% increase of the wind speed at the venturi for intake wind speeds of 3-12 m/s. Sotoudeh et al. have introduced double funneling system (two story funneling). They reported 44% increase of power of using two-story funneling system compared to single story system (INVELOX).

How do modern wind energy systems work?

Modern wind energy systems are of giant structures having a turbine generator on the top of tower at a height of 80 metres with control mechanisms like yaw control and pitch control. With this modern wind energy systems, exploitation of wind energy at low wind speeds is not possible, operation and maintenance and yaw control are difficult.

The transition to sustainable electricity generation depends heavily on renewable energy sources, particularly wind power. Making precise forecasts, which calls for clever predictive controllers, is a crucial aspect of maximizing the efficiency of wind turbines. This study presents DeepVELOX, a new methodology. With this method, sophisticated machine ...

generating power. Generated power is in the range of 0.0001 W to 9.93 W over a range of wind velocities at

funnel inlet as 0.5 m/s to 7.89 m/s. With this, FBWEHS is feasible to generate ...

The invention relates to a multi-funnel cyclone wind power generation system, which comprises an engine body, a bracket, a circular platform, and a wind collecting head. The axial central lines of the air inlet and air outlet of the wind collecting head are horizontal and vertical, respectively. A flange and an outer gear ring are arranged outside the air outlet.

Wind turbines, therefore, act as the main of the wind energy power generation hierarchy, which converts the kinetic energy of wind into electric power. However, low wind velocity is a limiting factor that significantly diminishes the power generation capacity of wind turbines. ... Wind funnel generator is channeling interest. Power, 160 (2016 ...

Some wind power experts say that's too good to be true. "The first attempt to build a ducted turbine similar to the Invelox was made 90 years ago," Mike Barnard, a senior fellow with the Energy and Policy Institute, wrote ...

Wind Funnel Concentrator System captures wind flow from any direction, funnels it down using tapered pipes leading to a concentrator that ends in Venturi section where the turbine should be placed. This Wind Concentrator ...

SheerWind has developed a new-aged wind power generation system that produces more electrical energy efficiency at roughly 75% of the cost of traditional turbines. The technology is safe for humans and wildlife, requires less maintenance than conventional wind systems and produces more electricity per dollar invested than conventional systems.

5 Wind energy plays a crucial role as a renewable source for electricity generation, especially in remote or isolated regions without access to the main power grid. The intermittent ...

terms of power generation of traditional turbines. The INVELOX attained 11.9m/s wind speed at venturi section that is 6-8 times more power than traditional wind energy. The INVELOX system produced more power as compared to traditional wind turbines.6 The funnel-based wind power capturing system developed with

Wind funnel power generation

The Sheerwind Invelox wind turbine promises to produce 6 times more electrical power than traditional wind turbines. This unique wind tower acts like a funnel, directing the wind from any angle, down through a tube to a ground-based turbine generator.

SheerWind recently announced their newest innovation as part of its Invelox technology. The technology integrates three turbines in a row or series and increases the electrical power output for a single tower. SheerWind's Invelox system is a large funnel that captures, concentrates, and accelerates wind before delivering it to turbines safely and ...

Abstract. Mountains can modify the weather downstream of the terrain. In particular, when stably stratified air ascends a mountain barrier, buoyancy perturbations develop. These perturbations can trigger mountain waves downstream of the mountains that can reach deep into the atmospheric boundary layer where wind turbines operate. Several such cases of mountain ...

The INVELOX system produced more power as compared to traditional wind turbines. 6 The funnel-based wind power capturing system developed with propeller blade having diameter of 7 cm that ... For maximum power generation, there are two principles to optimize the power generation in the wind turbine, which are as follows: (1) increase the mass ...

Modern wind energy systems are of giant structures having a turbine generator on the top of tower at a height of 80 metres with control mechanisms like yaw control and pitch control.

Intake collects wind from any direction Funnel concentrates wind Venturi increases wind speed 3 turbine/generators Diffuser slows wind The first wind power generation system, namely INVELOX(TM), with three turbines is presented in this paper. This breakthrough technology is often referenced as "The New Face of Wind Power." INVELOX solves ...

However, the power generation of the SCPP comprehensive system was lessened, because parts of energy were used to desalinate seawater [27], [32]. ... Power generation from wind turbines in a solar chimney. Int J Energy Environ, 4 (2013), pp. 2041-2049, 10.1115/ES2011-54085. Google Scholar

SheerWind, a US wind energy company, has announced that their innovative INVELOX tunnel-based wind turbine system has proven that it is capable of producing 600% more power than traditional wind ...

The disclosure relates to a funnel wind generator comprising at least one vertically located turbine (1) and having thereabout a plurality of outwardly extending wings (10) which direct the flow of wind to the turbine to cause efficient operation thereof. The wings are tangential to the periphery of the turbine and are equidistantly spaced around the periphery of ...
